NICHOLAS **WEBSTER**

Software Engineer

0409723001
nick.m.webster@gmail.com
https://github.com/TotallyNick

SUMMARY:

Eager to contribute as an Entry-Level Software Engineer emphasising effective problem-solving and collaborative teamwork to deliver high-quality software. Proficient in C, C++ and with an interest in enhancing digital solutions through innovative design and code maintenance. Striving for excellence in software engineering with a commitment to professional growth within the tech industry.

Skills:

Front End Developement:
JavaScript, Angular, php, Laravel

Back-End Developement:
MongoDB, ExpressJS, NodeJS, Python

Embedded Systems:
C, GPIO subsystems, Watchdogs, Service Routines

Networking:
Subnetting, VLSM, Routing

Projects:

Tetris Clone **Video**

October 2024

- Developed a Simple remake of a retro videogame Tetris in Java.
- Game logic and GUI implemented with Java Swing
- Implemented highscore capture with Gson to save scores in a JSON file

EDUCATION:

Bachelor of Engineering (Honours) 1546 - July 2022 - Present - Griffith University

Course/ Training:

Embedded Systems 2303ENG:
Programming and interfacing of a modern microcontroller. The course outlines the theory behind microcontrollers, with a focus on architecture, memory structures, and peripheral interfacing. Insight into programming methodologies in C and illustrates ways of successfully debugging embedded systems.

Project Management Principles 3004ENG:
Develops your understanding of project management principles and the professional capabilities needed to deliver projects in practice, aligned with the Engineers Australia framework and equally relevant to the built environment, sciences and design disciplines.

Software Frameworks 3813ICT:
Modern software frameworks reduce development time and provide a solid foundation for building high quality software applications. This course covers full-stack development of real-world software applications using the selected frameworks.

Agile Business Analysis 3812ICT:
This course is primarily based on the IIBA's Agile Extension to the BABOK with limited inclusion of PMBOK and Agile Program Management Framework.

Mobile App Development 3701ICT:
Build the knowledge and skills necessary to develop native mobile applications that exploit the device capabilities including camera, compass, gestures, and sensors such as accelerometer to create effective and highly interactive mobile applications.

Ethical Hacking 3809ICT:
Will provide students with a comprehensive understanding of the principles, techniques, and tools used in ethical hacking, also known as penetration testing or vulnerability assessment.

System and Software Design 2815ICT:
Software design plays a significant role in developing software: during software design, software engineers produce various models that form a kind of blueprint of the solution to be implemented.

Computer Networking Essentials 2809ICT:
Fundamental issues in modern data communications and computer networks. TCP/IP and ISO Layers

Digital Electronics 2315ENG:
To provide sound knowledge of the principles and practices of digital systems, both at the device and circuit level.
